

• AI MATCH COMPANION

Real-time football intelligence for fans and broadcast teams

Agentic match research, tactical vision Q&A, and broadcast ready narrative context on AMD-ready multimodal infrastructure.

AI AGENTS

QWEN VLM

ROCM

STREAMINGVLM + VLLM

WHY NOW

Live football context is fragmented, delayed, and hard to use in the moment.

FANS

Leave the match to understand it

Stats, history, and tactical explanations sit outside the viewing flow.

COMMENTATORS

Need research while the play keeps moving

Good notes are valuable only when they arrive before the moment passes.

PRODUCTS

Most sports AI is still static chat

It rarely combines video, game state, narrative beats, and live interaction.

- PRODUCT SURFACE

One broadcast layer for preparing, watching, detecting, and explaining the match.

PREPARE

Notes Hub

Seven agents turn team context into usable player notes, tactical themes, and storylines.

WATCH

Fan Lens

Full-screen match video with scoreboard, trivia cards, voice Q&A, and tuned commentary.

PRODUCE

Broadcast Studio

A teleprompter-style dashboard surfaces current and upcoming narrative beats.

LIVE WORKFLOW

The demo follows an actual match workflow.

01 · CONTEXT

Set teams and competition

Start from match context or a preset rivalry.

02 · RESEARCH

Generate broadcast notes

Agents collect form, history, players, news, weather, and tactical context.

03 · WATCH

Open Fan Lens

Video stays full-screen while overlays remain compact and broadcast-ready.

04 · ASK

Use tactical Q&A

Questions route through game state, notes, and vision analysis.

7-AGENT PIPELINE

Agents turn scattered football data into commentary-ready intelligence.

- ROCM-READY PATH

Designed for high-performance multimodal workloads on AMD GPUs.

INFERENCE

StreamingVLM plus Qwen VLM through vLLM

The model layer separates streaming video understanding from OpenAI-compatible Qwen serving.

HARDWARE

AMD Instinct MI300X target path

High-memory AMD GPU instances are a strong fit for longer video windows, KV cache retention, and multimodal analysis.

SYSTEM DESIGN

Realtime frontend, async agent backend, and model-serving abstraction.

- WHY IT WINS

A practical product wedge with an original multimodal workflow.

Beachhead: football creators and small broadcast teams that need a research desk without hiring one.

Expansion: clubs, leagues, fantasy communities, and streaming platforms can embed contextual match intelligence.

Revenue: SaaS subscriptions, per-match credits, white-label overlays, and API access.

Differentiation: agent research + live vision + game state + broadcast UI in one end-to-end product.
